

Our celebrations and rewards

September 2024

Houses

Fire

Earth

Water

Air

Houses

- **Ancient cultures were fascinated by the four basic elements of nature: water, wind, earth and fire.**
- They believed everything was made from these elements
- Myths, legends and stories surround the elements, underlining their beauty and importance.
- They are so precious that gods in different cultures across the world were assigned to keep, care for or control them.
- Famous examples are Gaia, the Greek goddess of earth, and Poseidon, god of the sea.

Fire house

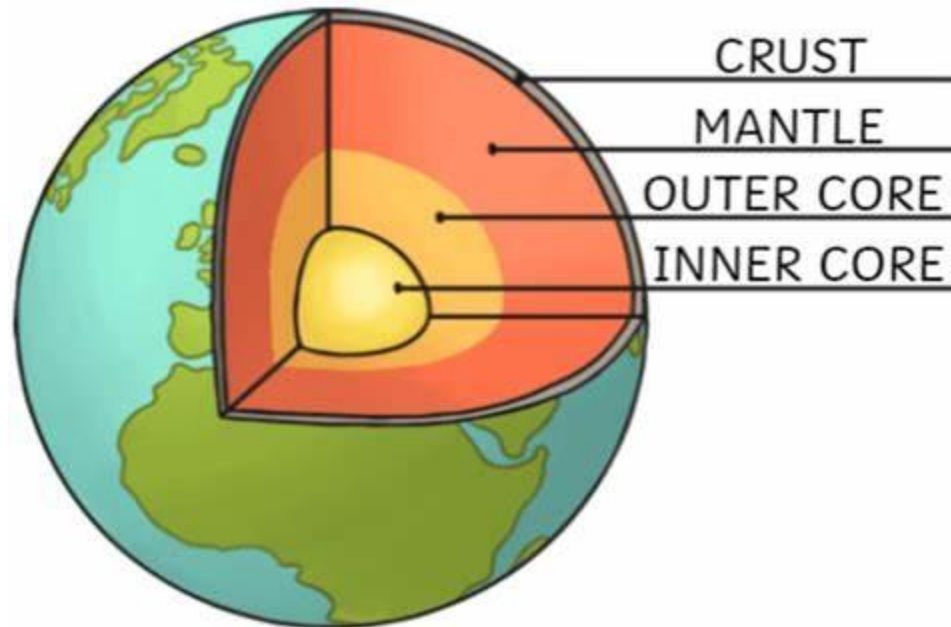

- Fire is a useful tool for us. Whether this be heating a cold room in the middle of winter, or cooking on a barbecue, there's no denying how helpful this element of nature can be. Even people from prehistoric times made use of fire, with the first evidence of cooking dating back one million years ago.
- Fire gives out heat and light which is useful to all

Earth House

- Earth is made up of lots of minerals and rocks, all of which support the growth of crops and other life forms.
- Here is a list of the earth's layers, from the deepest to closest to us:

- The inner core;
- The core;
- The mantle;
- The crust.

Water house

- We can't live without water, so it makes sense that it's one of the main elements of nature. It's a liquid substance made up of hydrogen and oxygen, and it's something that we depend on every day!
- There are so many reasons why we rely on water. It regulates our body temperature, helps flush out unwanted bacteria, and even protects our vital organs. The human body is also 70% water, so it's no wonder that it's so important to us.
- This knowledge spans back thousands of years. Prehistoric humans caught on that, in order to survive, we need to drink water (and, of course, eat)
- In fact, we know that water is essential for all life on earth!

Air house

- Air refers to the combination of gases and elements in the atmosphere around us.
- We all think that we breathe in oxygen, and that's true, but the air around us is a mixture of oxygen, nitrogen, and tiny amounts of carbon dioxide and argon. Air is constantly around us- we're never without it!

Fire house

- Fire is a useful tool for us. Whether this be heating a cold room in the middle of winter, or cooking on a barbecue, there's no denying how helpful this element of nature can be. Even people from prehistoric times made use of fire, with the first evidence of cooking dating back one million years ago
- Fire also give out light which is useful for many reasons

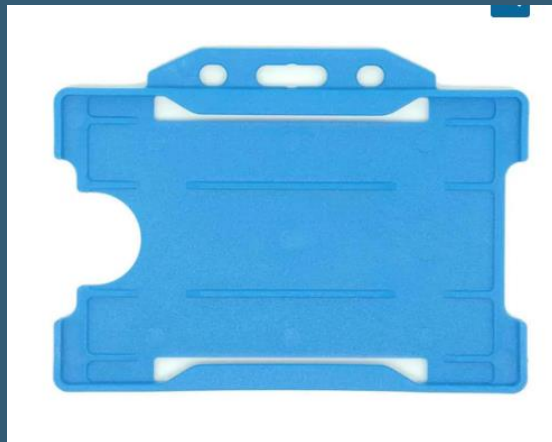

What else can we celebrate in houses...

- Tokens- white, black and gold
- House cups
- House competitions
- House singing

Our Celebration Assemblies
